

OH-31 Wireless Bluetooth Temperature and Humidity Sensor for iPhone

How it Works

Pull the plastic tab on the sensor to activate the battery. Download free app from Apple App Store (HT Tracker). Once downloaded press + on upper right screen on app to add the sensor. Place sensor with Oasis logo face up, on Apple iPhone or iPad to synchronize. App will read up to 7 sensors at one time, if no other Bluetooth devices are used on your phone. You get wireless Bluetooth humidity and temperature data pushed from the sensor up to 125' apart. Our humidity and temperature readings have the best accuracy available in today's market. When sensor and app are out of range, sensor stores up to 20 days of data. Data is downloaded once app and iPhone are back within the 125' range. Long term data (day, week, month and year) is displayed on the second page.
